

It's All About Access

In today's world, you need a fast, reliable connection to the Internet. Keeping your business connected to your customers, suppliers and employees is more important than ever.

We work with you to determine the most effective Internet solution based on your business size and scope, your enterprise locations, and the type of data you transmit. From simple solutions to customized network architecture, we offer a range of Internet and data networking solutions. This allows you to customize your service or enhance your services as your company grows.

►ADSL

AccessPipe ADSL is a great service for companies needing high speed broadband access at a low cost — and equipment is included.

Service Includes:

1 Static IP Address	Equipment	Up to 15 Mbps Download
10 Generic E-mail Accounts	Internet Access	Up to 1.0 Mbps Upload Speed
Basic Web Bundle		

Ala Carte Features

Dedicated Loop	Managed Virtual Private Network	Wireless Availability
E-mail and Web Bundle Upgrade	Static IP Address Upgrade	

**AccessPipe ADSL High Speed Internet service is provisioned as stand alone data. Refer to Access Point local service rate plans for shared internet and voice service*

►SDSL

AccessPipe SDSL is a great Internet T-1 alternative for companies needing more bandwidth than what ADSL can offer, at a fraction of the cost. With equal upload and download speeds, SDSL offers larger dedicated bandwidth for those companies who don't yet need a full Internet T-1.

Service Includes:

10 Generic E-mail Accounts	Equipment	Up to 1.5 Mbps Download and Upload Speed
Basic Web Bundle	Internet Access	Up to 4 Static IP Addresses at no charge

Ala Carte Features

E-mail and Web Bundle Upgrade	Priority Repair	Static IP Address Upgrade
Managed Virtual Private Network		

►Dedicated Internet

Whether you're looking for a single T-1 or a multi-megabit internet connection (i.e. n x T-1, DS3 and above), AccessPipe Dedicated Internet service provides you guaranteed bandwidth and reliability for your business internet needs at one low monthly service fee. When you buy an AccessPipe Internet T-1 you do not have to invest in a router, we provide one for use of the service.

Service Includes:

8 Static IP Address	Basic Web Bundle	Internet Access
10 Generic E-mail Accounts	Equipment (T1 – only)	Guaranteed Bandwidth

Ala Carte Features

E-mail and Web Bundle Upgrade	Managed Virtual Private Network	Static IP Address Upgrade

► Ethernet

AccessPipe Ethernet is a great service for companies needing high speed broadband access at a low cost — and equipment is included. AccessPipe Ethernet utilizes DSL and fiber technology as well as serial connections such as DS1 and DS3 loops to provide high speed bandwidths with Multiple Gigabit speeds.

Ethernet is an excellent value for small and medium businesses, or branch offices needing reliable broadband Internet service. Converge your LAN and WAN over a single Ethernet network, transport large volumes of sensitive data between locations, or deliver services such Internet Access, VoIP or other managed applications. Cost-effective, flexible, and scalable — AccessPipe Ethernet will provide the performance and reliability your business requires.

Service Includes:

Up to 4 Static IP Addresses at no charge	Basic Web Bundle	Internet Access
10 Generic E-mail Accounts	Equipment	Up to 30 Mbps Download and Upload Speed

Ala Carte Features

Dedicated Loop	Managed Virtual Private Network	Static IP Address Upgrade
E-mail and Web Bundle Upgrade		

► Cable

Cable Internet refers to the delivery of Internet service over cable network. A cable modem is used to transfer data signal using unused bandwidth on a cable television network. There are several advantages with this broadband Internet connection including your phone line is not occupied while you are connected to the internet, your service is 'always on', and exceptional speed.

Cable Internet connections offer some of the fastest speeds available. The obvious benefits of enhanced speeds are faster downloads and uploads. Cable Internet provides subscribers with a reliable cost effective way of going online.

► Wireless IP

AccessPipe Wireless IP is an alternative for companies needing more bandwidth than what traditional telco access methods can offer, at a fraction of the cost — and equipment is included. With equal upload and download speeds and without using any local loops, Wireless IP offers dedicated bandwidth up to 6 Mbps – the equivalent of 4 bonded T-1's. This service is currently available in the Chicago, Las Vegas, Los Angeles, and San Francisco. True bandwidth is based on distance to Wireless POP.

Service Includes:

Up to 4 Static IP Addresses at no charge	Basic Web Bundle	Internet Access
10 Generic E-mail Accounts	Equipment	Up to 1.5 Mbps Download and Upload Speed

Ala Carte Features

E-mail and Web Bundle Upgrade	Managed Virtual Private Network	Static IP Address Upgrade
